KRYPTONLOGIC TECHNOLOGIES

KRYPTONVISION

Next-Generation Enterprise AI Vision & Unified Video Management System

Autonomous Real-Time Threat Detection, Low-Latency Streaming, Visual Automation Rules, and Regulatory Compliance for Banking, NBFCs, Retail & Critical Infrastructure.

Sub-Second Streaming

Ultra-low-latency HLS/WebRTC with synced multi-camera playback.

Visual Rule Automation

No-code geometric zone designer with 36+ pre-seeded banking rules.

Anti-Storm AI Engine

Zero alarm fatigue with Redis fencing tokens & state cooldowns.

MARKET CHALLENGES & OPERATIONAL PAIN POINTS

The Critical Security Dilemma: Why Traditional CCTV Fails

95% Footage Unmonitored

HUMAN ATTENTION FAILURE

After just 20 minutes of continuous monitoring, security guards miss over 95% of active scene anomalies due to severe visual fatigue.

Alarm Storms & Noise

HIGH FALSE POSITIVE RATES

Legacy motion sensors trigger dozens of false alerts for shadows, insects, or light shifts, forcing SOC operators to disable notifications entirely.

Hours Lost in Forensics

DELAYED INCIDENT RESOLUTION

Scrubbing through hours of unsynchronized video across isolated cameras delays incident response, evidence gathering, and police reporting.

Regulatory Non-Compliance

ZERO AUDIT TRAIL ENFORCEMENT

High-security facilities (Gold Loans, Banks, Vaults) struggle to prove dual-custody access, perimeter integrity, and continuous retention.

THE KRYPTONVISION SOLUTION: Transform passive, forensic-only cameras into an active, intelligent, deterministic defense and compliance ecosystem.

END-TO-END DISTRIBUTED DESIGN

KryptonVision High-Assurance System Architecture

1. Edge Reverse Proxy (Caddy / TLS)

Enterprise ingress with automatic SSL/TLS termination, rate limiting, and HTTP/2 multiplexing for smooth video transport.

2. High-Performance Media Gateway

Microservices handling ONVIF/RTSP discovery, sub-second HLS transmuxing, and WebRTC streaming across 100+ concurrent cameras.

3. Autonomous AI Analytics Engine

GPU/NPU-accelerated neural networks (YOLOv8, background subtraction) running real-time point-in-polygon & tripwire crossing.

4. Distributed Redis 7 & PostgreSQL 16

Zero process-local state: Stream leases, viewer allocations, and camera ownership coordinated with epoch-based distributed locks.

5. Dual-Tier Storage Architecture

POSIX/NVMe edge recording vault for ultra-fast scrubbing + automated tiered retention to S3/NFS/SMB archives.

DATA & EVALUATION PIPELINE

```
[RTSP / ONVIF IP Streams]
  └─ Multi-brand camera feeds ingested securely at edge
        |
v  [AI Detectors: YOLOv8 / Edge NPU]
  └─ Detects Persons, Vehicles, Bags, PPE, and Scene Tampering
        |
v  [Persistent Multi-Object Tracker]
  └─ Assigns persistent Track IDs across frames for temporal continuity
        |
v  [Geometric Zone Engine (Ray-Casting)]
  └─ Calculates Point-in-Polygon (PIP) & directional line crossings
        |
v  [Compound Rule & Schedule Evaluator]
  └─ Evaluates Boolean conditions (AND/OR/NOT) against IST operating windows
        |
v  [Anti-Storm Deduplication & Cooldown]
  └─ Redis fencing tokens suppress spam; updates evidence clips continuously
        |
v  [Multi-Action Dispatcher]
  └─ Dispatches SOC alerts, relays sirens, pushes webhooks & initiates calls
```

CORE USER EXPERIENCE — REAL-TIME MONITORING

Unified Command Center & Live Video Wall

- **Sub-Second Streaming Latency (<400ms)**
  Live feeds are served with sub-second response times using WebRTC and low-latency HLS transmuxing.
- **Dynamic Matrix & Video Wall Grids**
  Seamless switching between 1x1, 2x2, 3x3, 4x4, and custom camera wall matrices across multiple monitor outputs.
- **Real-Time AI Bounding Overlays**
  Live visual indicators, bounding boxes, confidence metrics, and active zone overlays directly on the canvas.
- **Instant PTZ & Camera Controls**
  Pan, Tilt, and Zoom with presets, instant optical zoom, and one-click forensic snapshot captures.
- **Edge Fault Auto-Recovery**
  Built-in stream heartbeat detection with zero-flicker automatic reconnection if network bandwidth dips.

FORENSIC INVESTIGATION & EVIDENCE REVIEW

Multi-Camera Synchronized Playback & Time-Travel

- **Synchronized Multi-Angle Scrubbing**
  Scrub up to 16 camera angles simultaneously in perfect millisecond synchronization to follow suspect movement across doors and corridors.
- **Multi-Color Activity Heatmap Timeline**
  Visual timeline bar instantly differentiates continuous recordings, motion triggers, and high-severity AI compliance alerts.
- **Sub-Second Forensic Seek**
  Jump directly to the exact timestamp of an incident with zero buffer lag, eliminating hours of manual footage scanning.
- **Variable Speed & Jog-Shuttle Control**
  Fluid playback speeds from 0.25x slow-motion review up to 32x high-speed scanning with single-frame jog-stepping.
- **Instant Evidence Clipping**
  Select in/out timeline points directly from the playback view to export digitally signed MP4/MKV evidence clips.

Synchronized Multi-Camera Playback & Visual Heatmap (/surveillance/playback)

NO-CODE CONFIGURATION & AUTOMATION WORKSPACE

Visual Zone Designer & Compound Rule Engine

- **No-Code Geometric Drawing Canvas**
  Administrators can draw Polygons (vaults, counters, restricted zones) and Tripwires (entry lines, barriers) directly over live video.
- **Resolution-Independent Normalized Coordinates**
  Zones use normalized coordinates (0.0 to 1.0), ensuring detection accuracy even if camera resolution or aspect ratio shifts.
- **Compound Boolean Logic (AND / OR / NOT)**
  Eliminates false triggers by chaining multi-sensor conditions (e.g., PERSON_COUNT > 2 AND CASH_DRAWER == OPEN).
- **Timezone-Aware Operational Schedules**
  Schedules adhere to IST (Asia/Kolkata) with business-hours, after-hours, 24x7, and branch opening/closing dual custody windows.
- **Shadow Mode & Rule Simulation**
  Test rules against historical video archives in a safe simulation lab before promoting them to live enforcement.

ELIMINATING ALARM FATIGUE IN THE SOC

Anti-Storm Deduplication & Intelligent Alert Dispatch

- **The Alert Storm Problem Solved**
  Traditional AI systems generate 1,500 redundant alerts/min if a person lingers in a zone. KryptonVision eliminates this completely.
- **Distributed Redis Fencing Tokens**
  Guarantees that multiple cluster nodes never evaluate the same frame track concurrently, preventing race condition duplicates.
- **Configurable Cooldown State Machine**
  Rules enter an intelligent cooldown (60s–300s) after firing. Ongoing tracking clips are updated silently without spamming sirens.
- **Persistence Duration Filter (durationMs)**
  Conditions must hold true continuously for a defined duration (e.g., 3s) before firing, eliminating flickers and false alarms.
- **Multi-Channel Instant Escalation**
  Configurable dispatch matrix: SOC dashboard alerts, local relay sirens, webhooks, Telegram/WhatsApp alerts, and automated phone calls.

SOC Alert Operations & Triage Management (/operations/alerts)

36+ READY-TO-USE REGULATORY RULE TEMPLATES

Pre-Seeded Enterprise & Banking Compliance Engine

Vault & Strongroom Security [NBFC-R01 to R07]

- Dual-Control Solitary Access Alarm (Person count == 1 inside vault)
- Vault Over-Occupancy Alarm (>2 persons in strongroom)
- Strongroom Door Open Too Long (>180s without closure)
- After-Hours Vault Motion Intrusion (Critical severity alert)
- Unattended Open Vault (Door unlocked with 0 personnel present)

Pledge Counters & Cash Halls [NBFC-R08 to R14]

- Customer Crossing Teller Acrylic Barrier line
- Cash Counter Crowd Surge (>5 persons in counter area)
- Unattended Cash Counter (Drawer unlocked with teller away >120s)
- Teller Hall Loitering (>15 mins dwell time without transaction)
- Queue SLA Breach Alert (Queue length >8 persons for >3 mins)

Logistics & Cash Van Security [NBFC-R15 to R19]

- Cash Van Arrival Unmonitored (Armed guard missing from bay)
- Cash Transfer Line Crossing (Corridor unauthorized intrusion)
- Cash Box Left Unattended in Bay (>30s stationary package)
- Cash Van Extended Dwell Time (>30 mins in transfer bay)
- Emergency Corridor & Exit Route Obstruction

Perimeter & Anti-Tamper Integrity [NBFC-R25 to R36]

- Camera Spray / Blinding / Rapid Occlusion (<5s alert)
- Camera Lens Displacement / Defocusing attempt
- Continuous Recording Gap Exceeds SLA (>30s gap detected)
- Branch Shutter / Roof / Skylight Tampering attempt
- Edge Gateway Offline Heartbeat Interruption

VERIFIABLE CHAIN OF CUSTODY & REGULATORY AUDIT

Incident Response & Tamper-Proof Evidence Vault

- **End-to-End Incident Lifecycle**
  Seamless progression from live Alert -> Operator Acknowledgment -> Evidence Annotation -> Police / Legal Escalation.
- **Cryptographic Evidence Packaging**
  One-click export of court-admissible evidence bundles sealed with SHA-256 hashes and digital watermarks to prevent tampering.
- **Immutable Audit Ledger**
  Every operator interaction, stream view, PTZ motion, configuration change, and video export is written to an immutable log.
- **Operator Feedback Loop (Precision Tuning)**
  Operators mark detections as True Positive or False Alarm, providing ground-truth data for continuous AI model retraining.
- **External Regulatory Reporting**
  Generates compliant compliance PDF/CSV reports ready for RBI / Internal Audit inspection within seconds.

INFRASTRUCTURE VISIBILITY & PROACTIVE MAINTENANCE

Central Device Health, Diagnostics & Storage Lifecycle

- **Live Stream Quality Telemetry**
  Continuous real-time monitoring of camera FPS, bitrate, jitter, dropped frames, and packet loss across every branch.
- **Automated Camera Clock Drift Alerts**
  Alerts if a camera's hardware clock diverges from the server NTP by >1000ms, safeguarding legal timestamp validity.
- **Automated Maintenance Workorders**
  Automatically flags offline cameras, degraded streams, or lens obstructions, generating tickets for field service teams.
- **Storage Retention & Capacity Guard**
  Monitors storage disk volumes. Automatically triggers retention alerts when volume space drops below 15%.
- **Multi-Tier Storage Architecture**
  Optimizes cost by writing high-speed recordings to local SSDs while automatically transferring cold archives to cloud S3/NAS.

SCALABLE ORGANIZATIONAL MANAGEMENT & ACCESS CONTROL

Multi-Tenant Hierarchy & Enterprise Governance

- **Hierarchical Organizational Tree**
  Native multi-tier hierarchy: Tenant (Org) -> Region (North/South) -> Branch (Indiranagar) -> Zone (Vault/Counter) -> Camera.
- **Strict Scoped Access (RBAC & ABAC)**
  Predefined banking roles: Super Admin, Tenant Admin, SOC Operator, Branch Manager, Auditor, and Maintenance Engineer.
- **Branch Onboarding Wizard**
  Zero-friction branch provisioning with automated ONVIF network discovery and bulk camera channel assignment in minutes.
- **Device-Agnostic Interoperability**
  No proprietary camera lock-in. Connects seamlessly with any ONVIF Profile S/G/T or standard RTSP camera (Hikvision, Dahua, Axis, Hanwha, CP Plus).
- **Immutable Security Auditing**
  Every login, token grant, permission change, and camera configuration update is recorded forever in an append-only ledger.

THE QUANTIFIABLE VALUE DELIVERED BY KRYPTONVISION

Measurable Business ROI & Operational Impact

>92% Reduction

IN FALSE ALARMS

Compound boolean rules and intelligent cooldown state machines filter out environmental noise, letting SOC operators focus on genuine security breaches.

80% Faster

INCIDENT INVESTIGATION

Multi-camera synchronized playback and visual event heatmaps slash video forensic review times from hours to just minutes.

100% Compliance

AUDIT ADHERENCE

Automated dual-custody verification, strongroom duration controls, and tamper logging ensure effortless regulatory compliance.

4x Operator Scale

COST OPTIMIZATION

A single SOC operator can effectively monitor over 150+ cameras with intelligent automated triage, versus only 20-30 on traditional VMS.

TOTAL COST OF OWNERSHIP (TCO) ADVANTAGE:

KryptonVision works with your existing IP camera infrastructure without requiring expensive proprietary hardware replacements, slashing initial capital expenditures (CAPEX) while drastically reducing ongoing security staffing OPEX.

STRUCTURED AGENDA FOR TODAY'S PRODUCT PRESENTATION

Live Demonstration Walkthrough Flow

Step 1: Central Command & Live Video Wall

Experience sub-second multi-camera video streaming, dynamic grid arrangement, and instant PTZ response.

Step 2: Visual Zone Designer & Rule Creation

Watch how simple it is to draw a polygon zone over a live stream and activate a compound security rule in under 60 seconds.

Step 3: Real-Time Threat Trigger & Anti-Storm Alert

Observe live event detection in action with intelligent deduplication, cooldown suppression, and automated dispatch.

Step 4: Synchronized Playback & Forensic Investigation

Seamlessly scrub through multi-angle historical video, inspect heatmap markers, and jump precisely to breach moments.

Step 5: Evidence Packaging & Audit Integrity

Generate a digitally signed, tamper-proof evidence bundle with cryptographic SHA-256 hash sealing.

ARCHITECTED TO FIT YOUR INFRASTRUCTURE

Deployment Flexibility & System Compatibility

On-Premises Edge Appliance

HIGHEST SECURITY & PRIVACY

- Deploys directly on local branch hardware or edge AI microservers.
- Zero continuous cloud bandwidth requirement.
- Local video storage with POSIX NVMe indexing.
- Ideal for high-security banking branches and air-gapped vaults.

Hybrid Enterprise Architecture

BEST OF BOTH WORLDS

- Edge inference & local recording at branch level.
- Central cloud management for SOC command center & compliance.
- Low WAN bandwidth consumption with metadata-only synchronization.
- Clustered multi-branch aggregation across regional offices.

Fully Cloud-Managed VMS

MAXIMUM SCALABILITY & AGILITY

- Direct secure gateway streaming to cloud infrastructure (AWS/GCP/Azure).
- Unlimited tiered storage retention with automatic S3 archival.
- Global accessibility from any authenticated device or SOC terminal.
- Instant zero-maintenance updates and elastic scaling.

KRYPTONLOGIC TECHNOLOGIES

Ready to Transform Your Surveillance?

KryptonVision upgrades existing video surveillance networks into an intelligent, proactive, and compliant security command ecosystem.

RECOMMENDED NEXT STEPS: 48-HOUR PILOT / PROOF-OF-CONCEPT

Deploy KryptonVision on 5-10 existing cameras in your live environment with zero disruption. Experience real-time alerts, visual rules, and synchronized playback within 48 hours.

Thank You! Let's Proceed to the Live Product Demo & Q/A
